

A little bit about me....

#TeamHuman Community Rooted AI Research

Timnit Gebru

The Distributed AI Research Institute is a space for independent, community-rooted AI research, free from Big Tech's pervasive influence.

How satellite images and AI could help fight spatial apartheid in South Africa

Townships get little by way of public resources compared with rich suburbs. By mapping the problem, researchers like Raesetje Sefala hope to reverse it.

The AI startup outperforming Google Translate in Ethiopian languages

"Chatbots like ChatGPT are utterly broken or useless for these languages."

11 JULY 2023

TRANSLATE ▾

Asmelash Teka Hadgu is the co-founder and chief technology officer of Lesan, a Berlin-based startup developing machine translation products for Ethiopian languages. Founded in 2019, Lesan has launched translation tools for Amharic and Tigrinya, which it says outperform Google Translate in terms of quality. The startup's use of offline print resources to create a new benchmark data set for languages from the Horn of Africa has been key to its success.

This interview has been edited for length and clarity.

What Really Happened When Google Ousted Timnit Gebru

She was a star engineer who warned that messy AI can spread racism. Google brought her in. Then it forced her out. Can Big Tech take criticism from within?

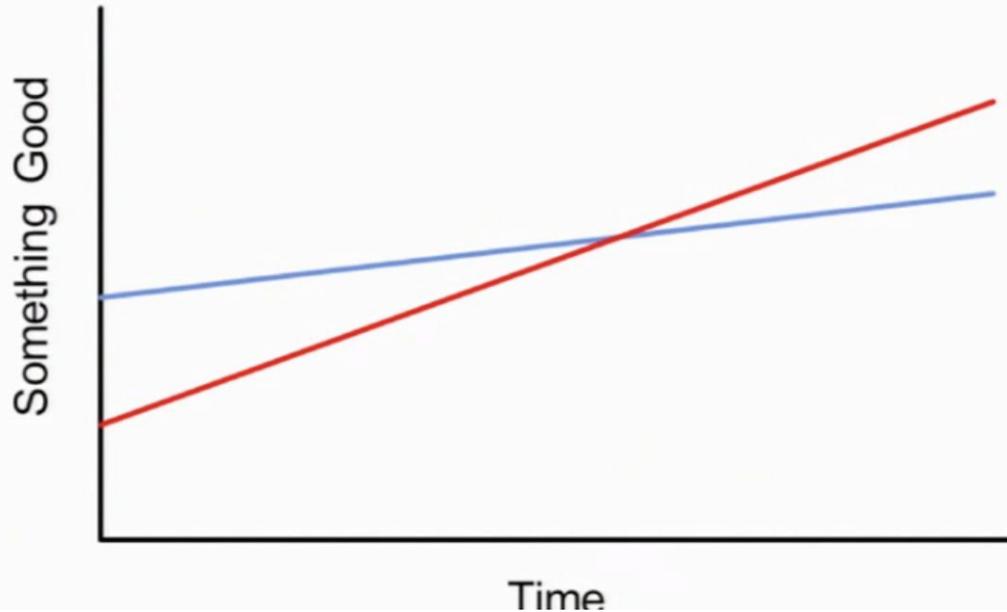

If you want to create technology that works for your community, you need to start with this class.

How many of you have done some type of computer science class or personal project?

"A little bit of slope makes up for a lot of y-intercept"

01/13/2012. From a lecture by Professor John Ousterhout at Stanford, class CS140

A Little Bit of Slope Makes Up for a Lot of Y-Intercept

Year

By the end of this week, for sure by the end of the course, you should be able to write the logic to make the tomato sorter work and do the book analysis.
